

Course name: <b>Information Security Management</b>	Credit value: <b>6</b>
Theoretical-practical division : <b>50-50</b> (credit%)	
Course time (in 45-minute classroom units) <b>Lecture: 26</b> <b>Practice (lab): 26</b> <b>Consultation: 26</b>	
Grading: exam + practice assignments	
Recommended semester: Semester 2	
Recommended prerequisites: Basics of “Introduction to Computer Security”	
<b>Syllabus</b>  The purpose of the course is to introduce students to the theory and practice of information security management.  Theoretical basics cover the following concepts: <ul style="list-style-type: none"> <li>• risk, risk models, risk assessment,</li> <li>• qualitative and quantitative methods,</li> <li>• business planning,</li> <li>• incident recovery.</li> </ul> Standards, frameworks, guidelines, and legislation regarding secure system development and the protection of information, people and systems are covered in the course.	
<b>Recommended literature</b>  Campbell, Tony: <b>Practical Information Security Management A Complete Guide to Planning and Implementation</b> , Apress, 2016  Tipton, H.F.; Krause, M. (2003). <b>Information Security Management Handbook</b> (5th ed.). CRC Press	
<b>Output</b>  a) <b>Knowledge</b> <ul style="list-style-type: none"> <li>• They have comprehensive and up-to-date knowledge and understanding of the general theories, contexts, facts, and the related concepts of IT, particularly – depending on their chosen specialization – in the areas of program design, synthesis and verification, logical programming, programming languages, computing models, computer architectures, operating systems, computer networks, distributed systems, database management systems, information theory, code theory, and cryptography.</li> <li>• They have comprehensive and up-to-date knowledge of the principles, methods, and problem solving approaches of the IT domain that contains processes for designing,</li> </ul>	

developing, operating, and controlling of IT Systems, particularly – depending on their chosen specialization – in the areas of programming technology; design, construction and management of complex software systems and state-of-the-art databases; service-oriented program design; the design, construction and management of information systems; the design and development of internet tools and services; the design, development and management of database systems; the design, construction and management of distributed systems, cryptography, data security and data protection.

- They are familiar with the principles of business, organizational and corporate procedure, information, data, software and technical-technological architectures as well as with the methods of describing and designing these architectures.
- They are aware of the vital basics of organization and management, quality assurance and controlling, which enable them to carry out leadership and management duties related to their specialisation.

**b) Skills and abilities**

- They are able to analyse and apply new problem-solving methods and procedures related to their IT specialisation
- They are able to apply their mathematical, computer science and informatics skills in a novel way in order to solve tasks in IT research and development.
- They are able to apply their IT skills in a diverse, multidisciplinary professional environment.
- They are familiar with IT professional vocabulary, which enables them to express themselves at a high level, both orally and in writing, in their mother tongue and (at least) in English; i.e. they are able to participate in discussions and debates, to write reports, to work with, understand and utilize scientific and technical literature (e.g. professional books, chapters, articles etc.).
- They are familiar with IT professional vocabulary, which enables them to express themselves at a high level, both orally and in writing, in their mother tongue and (at least) in English; i.e. they are able to participate in discussions and debates, to write reports, to work with, understand and utilize scientific and technical literature (e.g. professional books, chapters, articles etc.).

**c) Attitude**

- They follow professional and technological developments in their IT field.
- They are committed to critical feedback and evaluation based on self-examination.
- They are committed to lifelong learning, and are open to acquiring new IT competencies.
- They accept and make their co-workers apply the ethical principles of work and organizational culture as well as those of IT scientific research.
- They share their knowledge and consider it important to disseminate professional IT results.
- They consider it important to propagate and realise environmentally conscious behaviour and social responsibility, and they promote them with the help of information technology.
- They are committed to having quality requirements met and to analysing them with IT tools.
- They are open to proactive collaboration with IT and other professionals.
- 

**d) Autonomy and responsibility**

- They take responsibility for their professional decisions made in their IT-related activities.
- They undertake to meet deadlines and to have deadlines met.
- They bear responsibility for their own work as well as for the work of their colleagues they work together with in a project.
- Regarding mission critical IT systems, they can be entrusted with developing and operational responsibilities that are in accordance with their professional competencies.
