Typical requirements for user friendly SAP interactions integrating external tools

SIMPLIFICATIONS

Business transactions:

- Complex GUI business transactions
- Screen Personas: provision of existing business logic
- Fiori user interfaces: transactional and analytical SAP Apps

Controlling Area	NA00 GBI North America						
Fiscal Year	2019						
Period	1 To 12						
Version	000 Plan/Act - Version						
Cost Center	CC-AS000 Assembly 000						

Cost element/description	OTy	Partner Object	ParActivity	Val in CoCdCur	Fixd value in	Total Qty	Fixed Qty	Unit
8000000 Plan Asm. CC-CA000	CTR	CC-CA000		90,000.00	90,000.00			
Assessment				90,000.00	90,000.00			

Governance of emerging technologies in organizations

Emerging technologies:

scientific and industrial progress

➤ Predictive Analytics

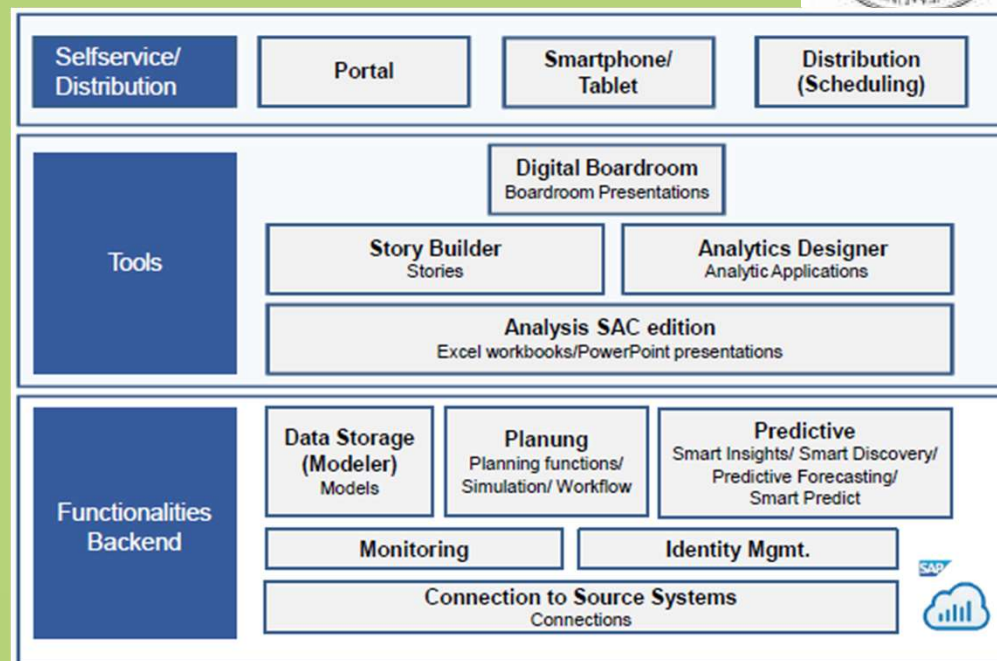

Forecasts, patterns of behavior

➤ SAP Analytic Cloud

Data analysis, planning, and value prediction.

Components for

- selfservice/distribution;
- tools;
- functionalities

Data Lake and Analytic solutions applying SAC

➤ Data integration, storage and connections

Collecting Data in the Data Lake

➤ Transfer Data to SAP Analytic Cloud:

- Import Files
 - Data storage in the SAC repository
 - Encrypted storage of data
- Connection is established between SAC and external systems (e.g. BW)
- Selecting available built-in SAC data models (account-based / key-figure –measure based model)

SAC Stories (Story Builder)

Building convenient SAC web reports and small dashboards

- applying integrated templates for specific requirements

Available design elements (widgets) predefined

- diagrams, tables, text, pictures
- easy customisation of the widgets

Analytical possibilities

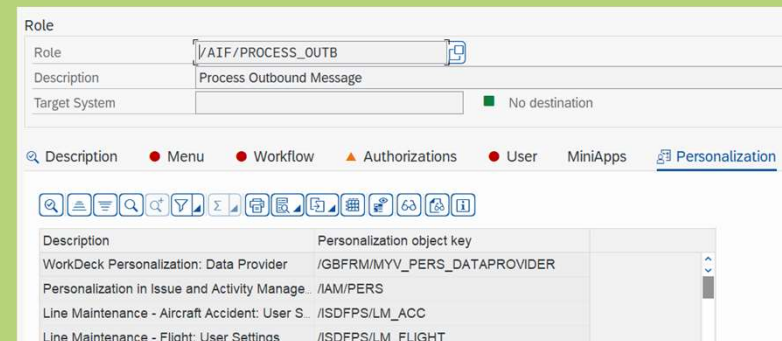

- data filtering
- creation of restricted and calculated key figures
- Rankings
- Conditional formatting

Authorization

SAC applies the Authorisation system handling

- User (Identity) Management
- Creating adequate roles
 - assigning predefined function permission to roles
 - Specifying desired type of access (create, read, update, modify, share)
- Assigning the roles to users or teams
- Assigning the folder shares
 - should be made on team level to ensure easy maintenance
 - specifying the desired type of access for the team to the folder (display/modify / full access)

Sales Dashboard

Creating a new model

Analytic model consisting of a fact table with a single measure.

The SAC Modeler contains 4 areas:

- Dimension overview shows the included dimensions.
 - o List of values of the dimensions
- Dimension Settings – display of properties of the selected dimensions
- Data Scheme – allows the model to be visualized as a star schema with fact table and surrounding dimensions
- Data Foundation – Provides a view of the transactional data

Creating an Analytic Application

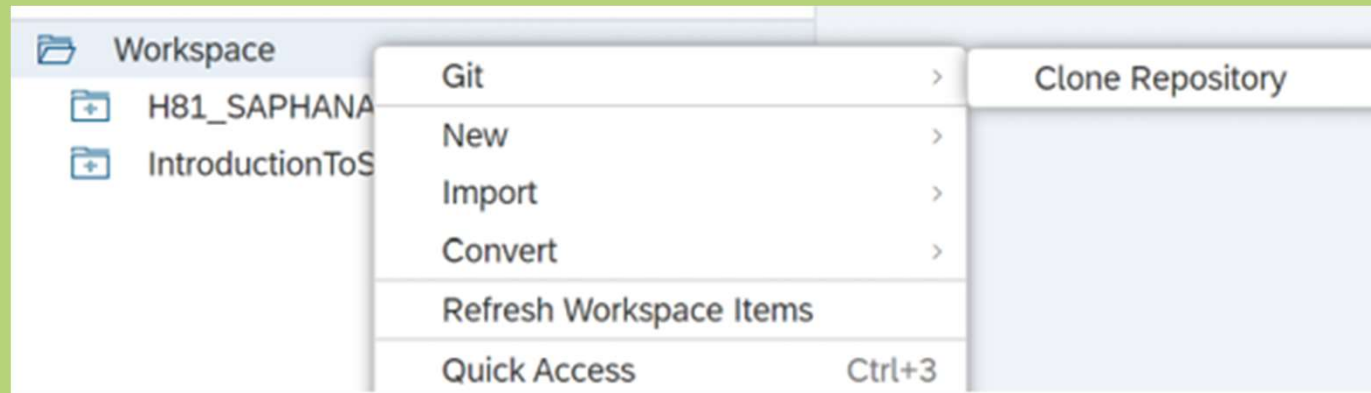

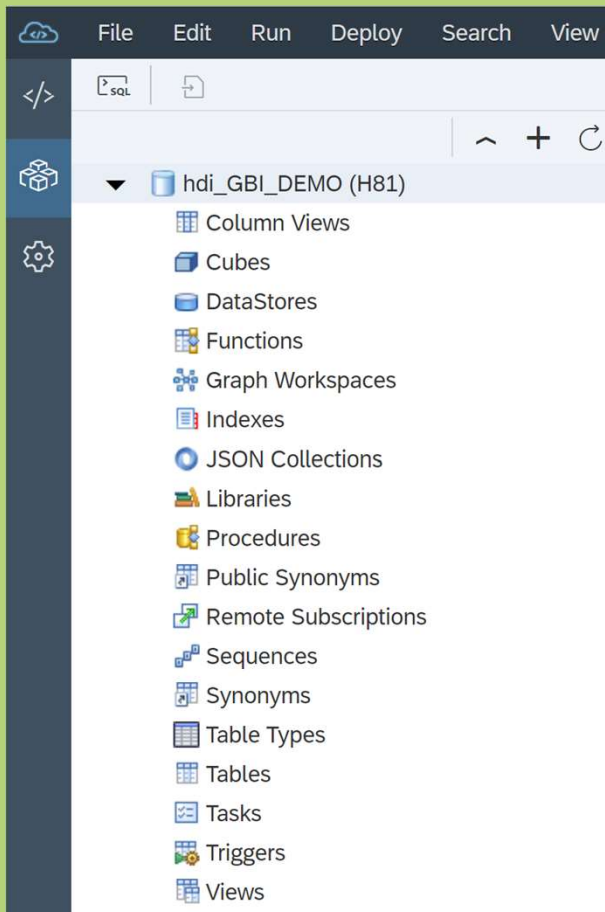

2023. 01. 18.

Development of SAP applications in WebIDE

• NativeDevelopment

+ external [master]

• DataMining

Development in SAP HANA: Reporting & Analysis

Three Types Information Views in HANA

Attribute View

Analytic View

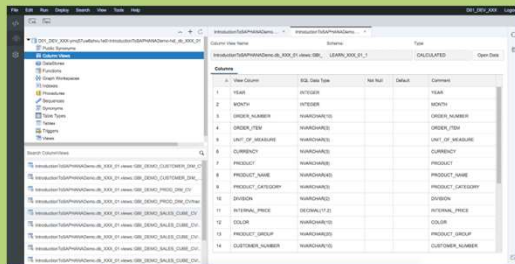

**Calculation View
(CV)**

Information views are used for analytical use cases such as operational data smart scenarios or multidimensional reporting

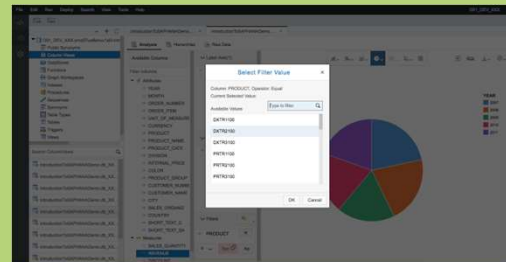

Web IDE - Data Visualization

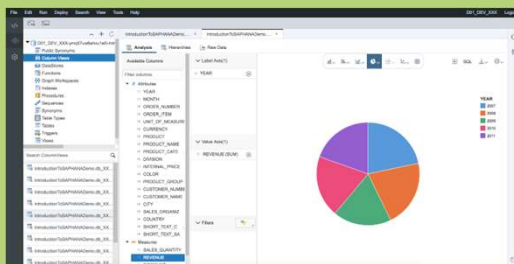

1. Select Data Set

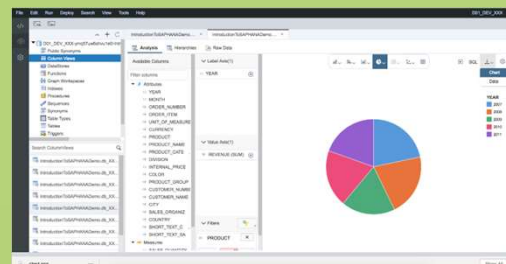

2. Add Filters

3. Build Visualization

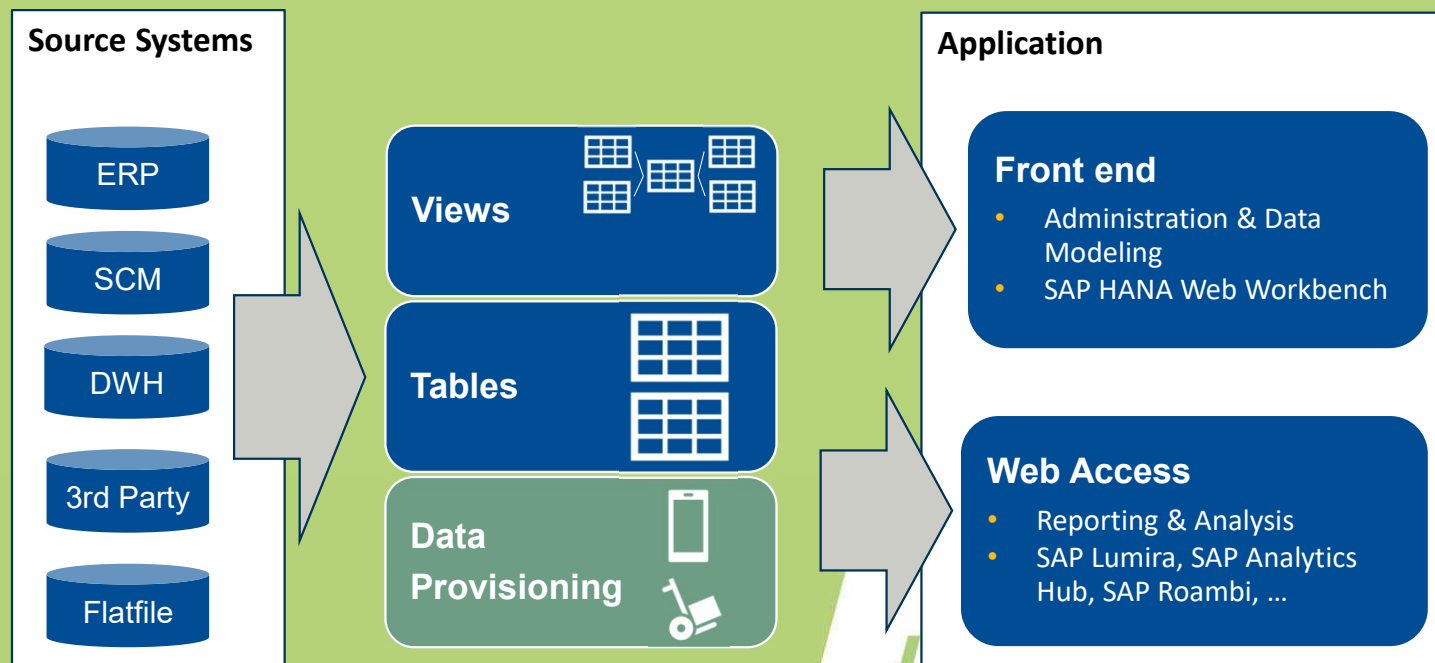

4. Export

SAP HANA Data Modeling

Digital Transformation driven by Strategy

Digital strategy drives digital maturity.

- Digital maturity is achieved in an organization where digital has transformed processes, talent engagement and business models through a coherent digital strategy

The power of a digital transformation strategy lies in its scope and objectives.

- Digital strategies are developed with an eye on transforming the business, not on individual technologies

Digital organizations build skills to realize the strategy.

- Recognizing and promoting skills and competencies a key task of the digital transformation

Taking risks becomes a cultural norm.

- Taking risks by trying new strategies, business models, products and approaches is the key to digital transformation

The digital agenda is led from the top.

- Digital fluency must be a key skill of the management

Efficient SAP UX

- Build Smart **User Interfaces** in SAP HANA Environment
 - **HTML**
 - **CSS**, and
 - **JavaScript**
- SAP Fiori app using SAPUI5 (HTML5)
- Fiori: modern user experience
- Benefits of smart user experience:
 - **improve productivity due to ease of use**
 - **automatic data corrections ensuring good data quality**

Native applications on SAP HANA extended application services

Web application development in SAP HANA

- A database layer (SAP HANA database)
- An application server layer
- A user interface (Fiori technologies)

Scope of our investigation:

Build a data-driven, user friendly architecture adjusting usiness finctions and information to an arbitrarily chosen Enterprise.

- First apprhoach: Build a DataLake enviromenet and process the information in SAP Analytical Cloud, Data Warehose Cloud, SAP HANA

Submissions

Ádám Tarcsi and Tamás Orosz: Impact of applying user friendly technologies and tools in SAP Analytic Cloud environment, 17th IEEE International Symposium on Applied Computational Intelligence and Informatics, 2023 (in progress).
